

Special Education, Curriculum-Based Measures, and Learning Recovery

LIVE WEBINAR
Wednesday, March 1
1:00–2:00 pm CT

Every day, educators are tasked with making good instructional decisions using *all* of the information available. This is often easier said than done, and it can be especially difficult when large numbers of students are struggling to meet grade-level expectations—or when a learning disability may be involved.

In this webinar, Dr. Rachel Brown and Dr. Scott McConnell will provide a decision-making framework you can use to confidently determine what type of instruction is needed to support all students' learning needs. Join them to learn more about:

- The history of CBMs and when they may be appropriate for identifying risk and monitoring progress
- The current landscape of special education and how CBM data can be used to assist teams in considering referrals and eligibility
- Using all of your assessment data—academic achievement *and* social-emotional behavior—to identify the best services and supports for each learner
